## Problem Analysis:

If you are a cinephile or someone who just wants to have a good time but you have a trouble finding good shows and theatres and you have been careless like most of us and have misplaced your tickets countless times.
Then common queries that arise are:
How to easily find nearest theatres and suitable show timings?
How to book tickets efficiently?

## Proposed Solution

Our team has come up with an online platform as a solution to this problem. Book My Movie is an Online Movie Booking management system which would help people by making the whole process of booking tickets easy and efficient and it would be easily accessible on the web. It provides the convenience of looking for the movies available in nearby theatres at suitable show times.

The users will login to their accounts and will get a list of movies. The user will be able to select any movies he is intrigued by and will be able to see all the nearby theatres where he can see all the details of the shows that are running in the theatre on that day. Tickets will be received once the payment has been made. The transaction reports, and bill receipts will be made available to the customer.
